 - Testing and Quality Assurance: Assisting in the development of test cases, participating in testing activities to ensure alignment with business and functional requirements.
 - Problem-Solving: Analyzing complex issues and proposing effective solutions in line with business objectives.
 - Process Improvement: Identifying opportunities for process optimization and recommending changes to enhance efficiency.
-

RECOMMENDATIONS

Wesam Al-Issa

04/30/23

HR Manager

I have worked with Bilal long enough to see passion, persistence and love for learning. Although my role was in Human Resources, and Bilal joined in a junior role in the software development team, my interactions with him and what I used to hear from his supervisor were about how he managed to learn, gain new skills, and excel in his work. None of this would have been possible, if he didn't have the self-motivation and passion to develop.

Buthaina Malouf

04/16/23

Quality Assurance Manager, Minerets Tech

Bilal has been an invaluable member of our team, particularly from a quality assurance perspective. His active participation and engagement in discussions while fixing bugs have been extremely valuable.
